Q: Kubernetes cluster and Docker-based docker client conflict I've got two microservices on Kubernetes cluster, clients and servers. Servers use docker client 18.09.3 and clients use docker 1.12.6. After applying default config changes in docker-compose.yml everything works fine. When I change configuration of Docker to version: '3' client: version: v1.12.6 it fails: client: version: v1.12.6 args: - "--insecure-registry=" 2016-05-05T17:08:41.746 INFO 1 --- [main]
