Data. Run time: 0.40.Products. Model: MT4. Brand: MICROSOFT. Operating System: Windows 7 32bit. Other. This item cannot be added to your Wish List.Q: How do I list all the available Wi-Fi channels in a Linux system? A: To see the available frequencies (in MHz) of your wifi card, run the command `sudo lshw -c network` To see the available channels, run `sudo iwconfig` If you're running a version of Ubuntu prior to 17.10, you'll need to install `python-netifaces` And then run the command `sudo iwlist` You can use the `iwlist` command. `iwlist [interface] channel scan` Will list the channels available. For more details see `man iwlist`. To get the configuration information about the device run the following command. `iwlist wlan0 scan | grep frequency` I'm pretty sure you will need the driver for the wireless adapter. Check the system documentation for your particular device. `ifconfig` will give you something like this: `eth0 Link encap:Ethernet HWaddr 00:00:00:00:00:00 inet addr:192.168.1.100 Bcast:192.168.1.255 Mask:255.255.255.0 inet6 addr: fe80::20e:ceff:fe9b:2984/64 Scope:Link UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1 RX packets:741874 errors:0 dropped:0 overruns:0 frame:0 TX packets:1076043 errors:0 dropped:0 overruns:0 carrier:0 collisions:0 txqueuelen:1000 RX bytes:4167362452 (4.1 GB) 82157476af`
